Speedhorse™ XT

How do you upgrade the ultimate jobsite upgrade? Give it adjustable legs.

The PM-4550 Speedhorse™ XT gives you all the benefits and features of the PM-4500 Speedhorse, with the added ability to extend the legs up to 6 inches.

We took our bestselling PM-4500 Speedhorse™ sawhorse and gave it individually extendable legs — meaning you can raise your Speedhorse™ XT to the height you need to work without pain. Plus, you can adjust each leg to different heights to make up for uneven ground.

Visit www.boratool.com for more information.

Raise the height up to 6 inches — Legs are independently adjustable in 1" increments. Increase the height of your Speedhorse from 30" to 36".

Level workspace on any site — Compensate for uneven terrain on the jobsite by extending each leg to the height you need.

Same deploy speed — Get the same instant setup and teardown you love with the PM-4500. Just readjust the legs back to 30" to fold back into the sawhorse.

Best-in-class weight capacity — Each individual unit can support 1500 lbs. — 200 lbs. more than the leading competitors.

The same features you know and love — Non-sequential leg folding, pre-drilled top, and end slots for 2x material are all here, ready to help you work.
